Dave - I think I mislabeled the email and directory on the FTP site. The following is an excerpt from Don Wood's email re: these files. So, it looks like both the WES and the USACE model files are in that directory. I don't know enough about the files or programs to differentiate them. I've attached a couple files from that FTP directory that might explain it better than I. Does this make any more (or less) sense now? Pl. advise. Bob

"It looks like when the work was first started we had gotten the model grid and data from WES and then Heather remodeled them using new alternatives for the CAD cells. In any event, it looks like the original WES computer files are here as well as the modified computer analysis. Unfortunately the word document that accompanies the analysis is not here."

Bob - sounds like something might be amiss here....the CDF hydrodynamic modeling was an NED product, not a WES product. By the "old WES" model I assume you're referring to the leachate flux modeling that was done for the CDFs by WES, no? If thats the case then I think we still need the NED hydrodynamic model itself (not the report)...

thanks - Dave

Modeling Files, NED hydrodynamic  
model for CDFs

Folks:

The "old" WES model files are in the directory labeled "New Bedford Wes Model" at the following USACE FTP location. Please let me know if you have any problems downloading the files.

Thanks

Bob
